

The Ultimate Coloured Rubber Granules

Rosehill TPV

ROSEHILL TPV®

The world's most technically advanced coloured rubber granule

Rosehill TPV® is the most advanced product of its kind in the world, specifically developed and rigorously tested to stand the test of time. Its unique chemistry, high quality raw materials and advanced manufacturing processes ensure consistent, vibrant coloured granules that deliver unrivalled UV resistance and long lasting elasticity.

Developed as a high quality rubber granule for sports, play and leisure environments, Rosehill TPV® is available in 22 standard colours and three granule sizes.

With thousands of successful installations worldwide, Rosehill TPV® ensures the highest level of surface performance for competition, training, play and leisure, even in the most challenging environments.

ROSEHILL TPV®

Stands the test of time

Whatever the project - whether it's for an international running track or a playground, a multi-use games area or an outdoor gym station, surfaces need to withstand the weather and wear and tear for many years.

Rosehill TPV® rubber granules deliver the ideal combination of durability, reliability and aesthetics, ensuring a high quality, longer lasting surface.

ROSEHILL TPV®

Brighter for longer

The value of any project comes over many years, so the durability and lifespan of a synthetic rubber surface is key. However, exposure to UV light causes coloured rubber surfaces to fade and discolour.

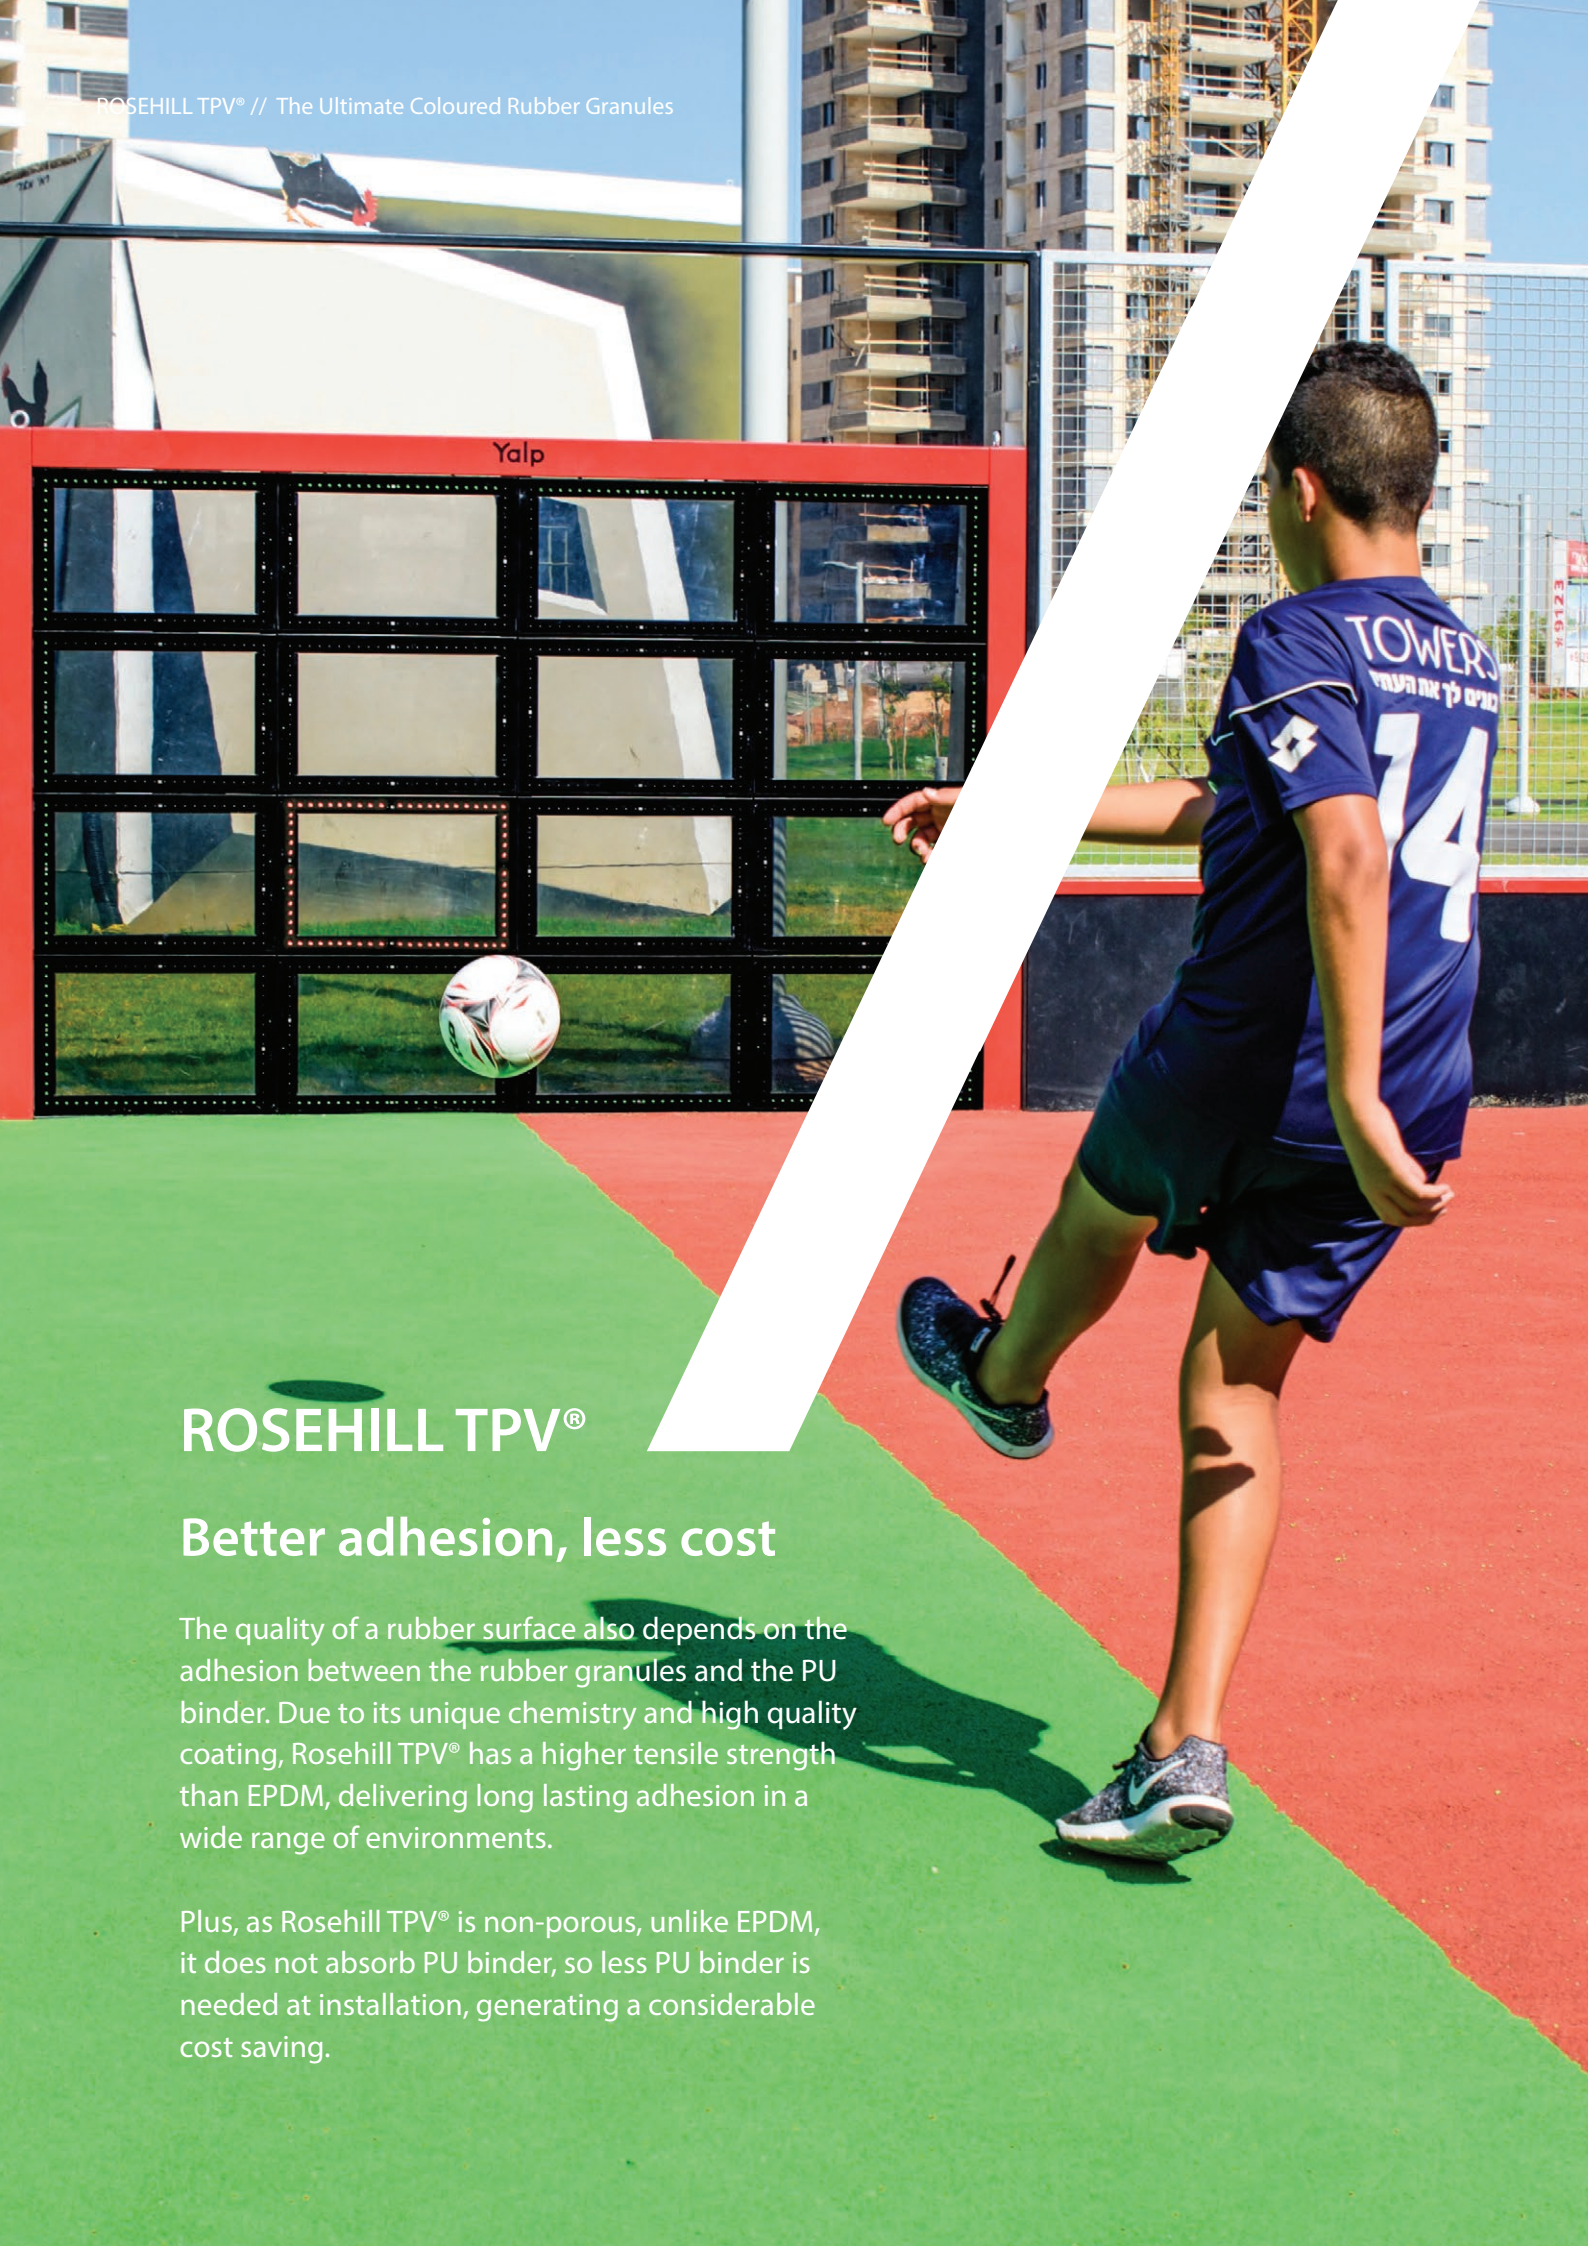

The unrivalled UV resistance of Rosehill TPV® sets it apart from other granules, ensuring surfaces retain their colour for longer, outlasting the best EPDM alternatives, even in the harshest environments.

ROSEHILL TPV®

Soft and flexible

Weather conditions and UV degradation cause EPDM rubber granules to lose their elasticity, making them unable to expand and contract with temperature changes. Surfaces harden and become harsh to the touch, like gravel. Granules become loose. The performance, aesthetics, and safety of surfaces suffer, increasing maintenance costs and more importantly, the risk of injury.

With its unique formulation Rosehill TPV® is globally recognised for its long lasting elasticity, remaining supple to the touch, even after extremes of UV ageing and sunlight.

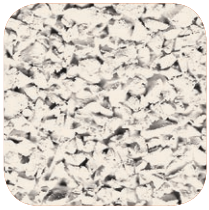

ROSEHILL TPV®

Better adhesion, less cost

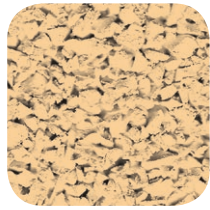

The quality of a rubber surface also depends on the adhesion between the rubber granules and the PU binder. Due to its unique chemistry and high quality coating, Rosehill TPV® has a higher tensile strength than EPDM, delivering long lasting adhesion in a wide range of environments.

Plus, as Rosehill TPV® is non-porous, unlike EPDM, it does not absorb PU binder, so less PU binder is needed at installation, generating a considerable cost saving.

Due to the variability of computer and printer settings, we cannot guarantee an exact colour match between the actual Rosehill TPV® colour and the colours shown here. Please confirm your colour selection using our high quality colour chart and sample dishes.

About Us

Rosehill Sports & Play is the market leading manufacturer of the unique Rosehill TPV® coloured rubber granule and Flexilon® range of polyurethane binders and adhesives.

Scientifically designed, our products are at the forefront of the global sports and leisure surfaces markets. Specified by architects and designers and used extensively by sports and play surface installation specialists, Rosehill TPV® has been installed in projects across the world, including Olympic Games events, Disney, Sea World and Universal Studios.

A division of Rosehill Polymers Group, the company is backed by the Group's central research and development facilities at our headquarters in the UK. Our team of talented and highly experienced polymer scientists drive innovation at the rapid speed needed to help our customers keep pace with the demands of their ever-changing environments and open up new opportunities.
